```
 461 *:OPTIONS. ENTRY ICHRCX02
 462 *:EOBJNAME.
 463 *
```

Log this local modification to the **RPIBLLPA EXEC** into the local version vector table. In earlier releases of z/VM, the **VMFSIM MODIFY** command was used. Starting with z/VM 5.2.0, you can use the **VMFSIM LOGMOD** command with more user-friendly syntax, as shown in the following example:

```
vmfsim logmod 7VMRAC10 vvtlcl e tdata :mod lcl0001 :part rpibllpa exc
```

The 2C2 disk should now contain `7VMRAC10 VVTLCL` and `RPIBLLPA EXCL0001` files. Example 4-16 shows the content of the `7VMRAC10` file.

Example 4-16 File list of the 2C2 disk

```
7VMRAC10 FILELIST A0  V 169  Trunc=169 Size=2 Line=1 Col=1 Alt=0
Cmd   Filename Filetype Fm Format Lrecl    Records     Blocks   Date
      7VMRAC10 VVTLCL   E1 V         32          1          1  6/14/16
      RPIBLLPA EXCL0001 E1 F         80        749         15  6/14/16

7VMRAC10 VVTLCL   E1  V 80  Trunc=80 Size=1
====>
    0 * * * Top of File * * *
    1  :PART.RPIBLLPA EXC :MOD.LCL0001
    2 * * * End of File * * *
```

Next, generate a new `RACFLPA LOADLIB` by using the **VMFBLD** command. When you run the command, make sure that you specify the **blist** parameter (in this case, **rpibllpa**), as shown in the following example:

```
vmfbld ppf 7VMRAC10 RACF rpibllpa (all)
```

If you do not specify this parameter, all build lists that are listed in the BLD section of the `7VMRAC10 PPF` file are built (see Example 4-17).

Example 4-17 VMFBLD process for loadlib

```
VMFBLD2195I VMFBLD PPF 7VMRAC10 RACF RPIBLLPA ( LOG CNTRL RPIVM NOCKVV
