

**Structure (2)**

A protective screen shall be defined as a fixed component that serves as a windscreen or windbreak designed to protect another fixed element of the bicycle in order to reduce its wind resistance.

A fuselage form shall be defined as an extension or streamlining of a section. This shall be tolerated as long as the ratio between the length  $L$  and the diameter  $D$  does not exceed 3. This rule does not apply to frame and fork of the bicycle.
