

2. Sign up to Storage insights on <https://ibm.biz/insightsreg>:
 - a. Within 24 hours an IBM representative will contact you to get started.
 - b. When you register, specify an owner for IBM Storage Insights. The owner manages access for other users and acts as the main contact.
 - c. You will receive a Welcome email when IBM Storage Insights is ready. The email contains a direct link to your dashboard.
3. Install data Collector in your data center to stream performance, capacity, and configuration metadata about storage systems to IBM Storage Insights. Select **Configuration Data Collectors**, click **Deploy Data Collectors** and get started. See Figure 14-10.
 - a. Choose your preferred operating system to download the data collector (Windows, Linux, or AIX).
 - b. Extract the contents of the data collector file on the virtual machine or server where you want it to run. 1 GB of RAM and 1 GB of disk space are required.
 - c. Run `installDataCollectorService.sh` (Linux/AIX) or `installDataCollectorService.bat` (Windows).
