

### ***Inserting a cleaning cartridge***

Each drive in the tape library requires cleaning. Tape drives that are used by the TS7700 subsystem can request a cleaning action when necessary. This cleaning is completed by the tape library automatically. However, the necessary cleaning cartridges must be provided.

**Remember:** A cleaning action is performed automatically by the tape libraries when necessary. A cleaning cartridge is good for 50 cleaning actions.

Use the cartridge magazine to insert cleaning cartridges into the I/O station, and then into the TS4500 tape library. Figure 9-102 shows how to set the TS4500 to move expired cleaning cartridges to the I/O station automatically.
