

70.2.8	Hash API Extensions	1072
70.2.9	AVs, HVs and undefined values	1073
70.2.10	References	1073
70.2.11	Blessed References and Class Objects	1074
70.2.12	Creating New Variables	1075
70.2.13	Reference Counts and Mortality	1076
70.2.14	Stashes and Globs	1077
70.2.15	Double-Typed SVs	1077
70.2.16	Magic Variables	1078
70.2.17	Assigning Magic	1078
70.2.18	Magic Virtual Tables	1079
70.2.19	Finding Magic	1081
70.2.20	Understanding the Magic of Tied Hashes and Arrays	1081
70.2.21	Localizing changes	1082
70.3	Subroutines	1084
70.3.1	XSUBs and the Argument Stack	1084
70.3.2	Calling Perl Routines from within C Programs	1085
70.3.3	Memory Allocation	1086
70.3.4	PerlIO	1086
70.3.5	Putting a C value on Perl stack	1087
70.3.6	Scratchpads	1087
70.3.7	Scratchpads and recursion	1087
70.4	Compiled code	1088
70.4.1	Code tree	1088
70.4.2	Examining the tree	1088
70.4.3	Compile pass 1: check routines	1089
70.4.4	Compile pass 1a: constant folding	1089
70.4.5	Compile pass 2: context propagation	1090
70.4.6	Compile pass 3: peephole optimization	1090
70.4.7	Pluggable runops	1090
70.5	Examining internal data structures with the dump functions	1090
70.6	How multiple interpreters and concurrency are supported	1091
70.6.1	Background and PERL_IMPLICIT_CONTEXT	1091
70.6.2	So what happened to dTHR?	1092
70.6.3	How do I use all this in extensions?	1092
70.6.4	Should I do anything special if I call perl from multiple threads?	1094
70.6.5	Future Plans and PERL_IMPLICIT_SYS	1094
70.7	Internal Functions	1094
70.7.1	Formatted Printing of IVs, UVs, and NVs	1095
70.7.2	Pointer-To-Integer and Integer-To-Pointer	1096
70.7.3	Source Documentation	1096
70.8	Unicode Support	1096
70.8.1	What is Unicode, anyway?	1097
70.8.2	How can I recognise a UTF-8 string?	1097
70.8.3	How does UTF-8 represent Unicode characters?	1097
70.8.4	How does Perl store UTF-8 strings?	1098
70.8.5	How do I convert a string to UTF-8?	1099
70.8.6	Is there anything else I need to know?	1099
70.9	Custom Operators	1099
70.10	AUTHORS	1100
70.11	SEE ALSO	1100
