JES3 examples and information

This appendix provides several configuration examples in which multiple tape libraries and tape devices, native devices in an IBM System Storage TS3500 tape library, and virtual devices in an IBM TS7700 are used. This appendix also describes the necessary parameters and considerations that must be installed in a job entry subsystem 3 (JES3) environment.

The following examples are used:

- ▶ Two libraries with an intermix of native drives of 3592-J1A and 3592-E05 installed
- ▶ Three libraries with an intermix of 3592-J1A, 3592-E05, 3592-E06/EU6, stand-alone cluster TS7700 Grid, and multi-cluster TS7700 Grid installed

This appendix includes the following sections:

- ▶ “JES3 support for system-managed tape” on page 830
- ▶ “Example with two separate tape libraries” on page 834
- ▶ “Example with three Tape Libraries” on page 836
- ▶ “Processing changes” on page 840
