

The following table explains each field in this display.

Field Name	Description
Mark	Shows the element mark. A mark is either a system-assigned mark or a user assigned-name, and is the same as that shown on the display. A mark is six characters long, the first character is an asterisk (*) and the last character is a blank. The middle four characters are: <ul style="list-style-type: none"> For a system-assigned mark, the middle four characters are one character for the element type followed by a three-digit sequence number. For box elements, the element type is B and the sequence number is 001 to 999. For a user-assigned name, the middle four characters are four characters specified as the value for the element name.
Measurement method	Shows the measurement method used to specify positions. You can change this value by pressing F6. You can also select centimeters or inches for the measurement unit in the Define Overlay Specifications display by specifying unit of measure.
Start position	The position parameter consists of across and down values. These values specify the horizontal and vertical start position of the element being defined.
End position	The position parameter consists of across and down values. These values specify the horizontal and vertical end position of the element being defined.
Element	An element name is 1 to 4 characters in length. If an element name is specified (not blank) for an element, the element mark is displayed as an asterisk (*) followed by the element name. It is not an asterisk (*) followed by the element type and three-digit sequence number. Specifies the element name.
Line type	Specifies the type of line used to draw the box on the printer. <p>1 Solid line ____</p> <p>2 Dashed line - - - -</p> <p>3 Dotted line</p>
Line width	The default value is 1 (Solid line). Specifies the width of line used to draw the box on the printer. <p>*NARROW 1/120 inch</p> <p>*MEDIUM 1/60 inch</p> <p>*WIDE 1/40 inch</p> <p>n If the unit of measure specified in the specification is inch, n is 0.00 - 1.00 otherwise n is 0.00 - 2.54.</p> <p>If you specify 0 for this parameter, the text in the box is formatted and the box is not printed. If the measurement method of the text in the box is Row/Column, it is formatted according to the line placement parameter.</p>
