

1 CORPORATE INFORMATION AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

(c) Summary of significant accounting policies (continued)

(xxiii) Interest-bearing loans and borrowings

All loans and borrowings are initially recognised at the fair value of the consideration received less directly attributable transaction costs. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the effective interest rate method. Gains and losses are recognised in the profit or loss when the liabilities are de-recognised.

(xxiv) Provisions

Provisions are recognised when the Group has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

When the Group expects some or all of a provision to be reimbursed, for example under an insurance contract, the reimbursement is recognised as a separate asset but only when the reimbursement is virtually certain. The expense relating to any provision is presented in profit or loss net of any reimbursement.

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a borrowing cost.

(xxv) Employee leave benefits

Wages, salaries, annual leave and sick leave

Provision is made for wages and salaries, including non-monetary benefits, and annual leave in respect of employees' services up to the reporting date. They are measured at the amounts expected to be paid when the liabilities are settled. Liabilities for non-accumulating sick leave are recognised when the leave is taken and are measured at the rates paid or payable.

Liabilities arising in respect of wages and salaries, annual leave and any other employee entitlements expected to be settled within twelve months of the reporting date are measured at their nominal amounts. All other employee benefit liabilities are measured at the present value of the estimated future cash outflow to be made in respect of services provided by employees up to the reporting date. The value of the employee share incentive scheme is being charged as an employee benefits expense. Refer to Note 1(c)(xxvi) for the share-based payment transactions policy.

Long service leave

The liability for long service leave is recognised in the provision for employee benefits and measured as the present value of expected future payments to be made in respect of services provided by employees up to the reporting date using the projected unit credit method. Consideration is given to expected future wage and salary levels, experience of employee departures, and periods of service. Expected future payments are discounted using market yields at the reporting date on national government bonds with terms to maturity and currencies that match, as closely as possible, the estimated future cash outflows.

(xxvi) Share-based payment transactions

The Group provides benefits to employees (including senior executives) of the Group in the form of share-based payments, whereby employees render services in exchange for shares or rights over shares (equity-settled transactions). The plans currently in place to provide these benefits are the Company's Executive Share Plan and Loan Facility and the 2012 Option Plan for the Company's Chief Executive Officer, and ceasing in 2013, the 2008 Option Plan for the Company's Chief Executive Officer, which provide benefits to directors and senior executives. The grant of rights under the Executive Share Plan and Loan Facility are treated as "in substance options", even where the equity instrument is not an option.

The cost of equity-settled transactions with employees is measured by reference to the fair value of the equity instruments at the date at which they are granted. The fair value is determined by an external valuer using either the Monte Carlo, binomial or Black-Scholes models. In valuing equity-settled transactions, no account is taken of any performance conditions, other than conditions linked to the price of the shares of VRL (market conditions) if applicable.

The cost of equity-settled transactions is recognised, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled, ending on the date on which the relevant employees become fully entitled to the award (the vesting period).

The cumulative expense recognised for equity-settled transactions at each reporting date until vesting date reflects the extent to which the vesting

period has expired and the Group's best estimate of the number of equity instruments that will ultimately vest. No adjustment is made for the likelihood of market performance conditions being met as the effect of these conditions is included in the determination of fair value at grant date. The profit or loss charge or credit for a period represents the movement in cumulative expense recognised as at the beginning and end of that period. No expense is recognised for awards that do not ultimately vest, except for awards where vesting is only conditional upon a market condition.

If the terms of an equity-settled award are modified, as a minimum an expense is recognised as if the terms had not been modified. In addition, an expense is recognised for any modification that increases the total fair value of the share-based payment arrangement, or is otherwise beneficial to the employee, as measured at the date of modification.

If an equity-settled award is cancelled, it is treated as if it had vested on the date of cancellation, and any expense not yet recognised for the award is recognised immediately. However, if a new award is substituted for the cancelled award and designated as a replacement award on the date that it is granted, the cancelled and new award are treated as if they were a modification of the original award, as described in the previous paragraph.

The dilutive effect, if any, of outstanding options is reflected as additional share dilution in the computation of earnings per share (refer Note 3).

Shares in the Group relating to the various employee share plans and which are subject to non-recourse loans are deducted from equity. Refer Note 25 for share-based payment disclosures relating to "in substance options".

(xxvii) Contributed equity

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of new shares or options are shown in equity as a deduction, net of tax, from the proceeds. Incremental costs directly attributable to the buyback of shares are shown in equity, net of tax, as part of the buyback cost.

(xxviii) Earnings per share

Basic earnings per share is calculated as net profit attributable to members of the parent, adjusted to exclude any costs of servicing equity (other than dividends) and preference share dividends, divided by the weighted average number of ordinary shares, adjusted for any bonus element.

When there are potential ordinary shares that are dilutive, diluted earnings per share is calculated as net profit attributable to members of the parent, adjusted for:

- costs of servicing equity (other than dividends) and preference share dividends;
- the after tax effect of dividends and interest associated with dilutive potential ordinary shares that have been recognised as expenses; and
- other non-discretionary changes in revenues or expenses during the period that would result from the dilution of potential ordinary shares;

divided by the weighted average number of ordinary shares and dilutive potential ordinary shares, adjusted for any bonus element.

(xxix) Segment reporting

The Group has identified its operating segments based on the internal reports that are reviewed and used by the executive management team (the chief operating decision maker) in assessing performance and in determining the allocation of resources.

Discrete financial information about each of these segments is reported to the executive management team on a monthly basis. These operating segments are then aggregated based on similar economic characteristics to form the following reportable segments:

- | | |
|---------------------|---|
| – Theme Parks | Theme park and water park operations |
| – Cinema Exhibition | Cinema exhibition operations |
| – Film Distribution | Film and DVD distribution operations |
| – Other | Other represents financial information which is not allocated to the reportable segments. |

A geographic region is identified when products or services are provided within a particular economic environment subject to risks and returns that are different from those segments operating in other economic environments. Revenue from geographic locations is attributed to geographic location based on the location of the customers.

The segment revenue that is disclosed to the chief operating decision maker in Note 29 is in accordance with IFRS. Inter-segment revenue applies the same revenue recognition principles as per Note 1(c)(iii).
